12 Tonne Copper Earth Connector Dies - K12 Series

Selecting the correct "C" type earth connector Compression Die is directly related to the style of "C" connector and the sizes of copper earth wire and/or earth rod being connected. Below are the most common types of "C" Connectors and the corresponding 12T Dies. These connectors are specifically designed for applications requiring corrosion resistant, high current jointing or tapping of buried copper earth grids, or to earth rods in zone substation and for pole and pad mounted transformers, therefore die selection is extremely important. The most common ranges of connectors are typically dimensionally identical in the Australian market.

Insulated Battery Tools

Your Safety is our priority

Klauke's Orange Line series of battery powered hydraulic cutting and crimping tools are the world's first of their kind, offering protection from electric shocks up to 1000 V. The TRI-INSULATION BARRIER, developed in-house, prevents voltage discharging between tool head and tool body. Every single tool is tested for compliance with the electrical requirements of IEC 60900 in their production process. This guarantees voltage protection up to 1000V.

TRI-INSULATION BARRIER

- 1. CREEPAGE DISTANCE**
CLEVER DESIGN ENSURES MINIMUM 12.5MM DISTANCE BETWEEN NON INSULATED PARTS
- 2. PA6 INSULATION**
PLASTIC HOUSING MATERIAL WITH EXCELLENT INSULATING PROPERTIES
- 3. DIELECTRIC OIL**
HYDRAULIC OIL WITH HIGH DIELECTRIC INSULATING PROPERTY

- VDE tested and certified up to 1000V in accordance to the electrical requirements of IEC 60900.
- Insulation from the head provides protection for the operator.
- Bright Orange rubberised body provides non slip protection and differentiates from standard tools.

Working on or near live low-voltage parts up to 1000V is often part of every day work in certain sectors. The use of insulated manual hand tools in tight workspaces and exerting the force required to operate insulated manual hand tools poses a safety risk to the operator.

Klauke Orange tools offers battery-powered cutting and crimping that can significantly reduce operator risk by improving precision and safety in these hazardous work conditions.

Augers, Impact - Woodpecker

Woodpecker Impact Auger Bits are engineered to deliver fast, clean cut holes in Australian hardwood power poles.

The new, improved high grade steel alloy is designed for a longer bit life, staying sharper longer. Featuring a single, heat treated and tempered cutting edge for fast, effortless boring in hardwood. The clean cut of these bits allows easier removal from the pole and helps bolts to slide through with less resistance.

The design is optimised to cut quickly through hardwood with an aggressive lead screw pulling the bit through the material more easily while the wider flute design quickly ejects the chips to clear the hole. This helps to reduce heat, leading to overall faster drilling speeds and longer tool life.

Features

- Designed to drill cleaner and faster holes in Australian hardwood poles
- 7/16" Quick change hex shank – suitable for electric drills or impact wrenches
- Optimum shaped wide cutting flute ensures a faster chip ejection, less friction and a longer lasting cutting edge
- Solid core for added strength, auger stability and extended tool life
- Supplied in a protective storage case

Designed to drill the Toughest Australian Hardwoods
