

## Foam Duct Sealant

## Polywater FSTBP™ Duct Sealant

New to the Polywater family of FST sealants, the FSTBP Duct Sealant™ is ideal for the protection of ducts 125mm (5 in.) diameter and larger. Easily mixed in its self-contained burst pack, the FSTBP is dispensed into the duct where it expands and hardens to form a strong, closed-cell seal. FSTBP Duct Sealant™ is durable and flame retardant to protect valuable infrastructure from water and fire damage.

FSTBP Duct Sealant comes in an easy to use, self-dispensing burst pack. The diagrams below show the easy four-step application process of the FSTBP Duct Sealant to protect ducts and other infrastructure assets.

- FSTBP Duct Sealant™ has 98% closed-cell content for increased strength and resiliency
- FSTBP Duct Sealant™ resists seven meters (22ft) of waterhead pressure
- FSTBP Duct Sealant™ is compatible with cable and duct materials
- FSTBP Duct Sealant™ is chemically resistant to gasoline, oils, dilute acids and bases, and most unsaturated hydrocarbons
- Prevents the passage of gas; does not sag; will not dry out; and is re-enterrable
