TEN Manufactured Canvas and PVC Products

TEN's range of quality Australian made storage solutions and accessories are industry proven and tested to our stringent quality standards.

A range of options are available including customised logos, identification numbers & warning labels. All our manufactured products use the highest quality materials.

PVC

Australian made 680gsm high tenacity PVC made in a tear stop construction commonly used in extra heavy duty tarpaulins. Tear stop design decreases the chances of a tear or cut in the material from increasing. The base fabric is lacquer coated for extra protection and dirt resistant. It is also flame retardant, mildew resistant and UV resistant.

Heavy Duty Canvas

Our Tear stop canvas has core spun threads woven throughout for added strength and resistant to damage. The fabric is 535gsm, UV and mildew resistant, features excellent shrink and colour control and is completely breathable minimising internal moisture build up. This canvas is made tough for the harsh Australian conditions and is commonly used in the transport industry.

Webbing & Stitching

Our heavy duty polyester webbing (also known as seat belt webbing) is used for its strength and low elongation under load. It is ideal for support banding and handles, it is light and strong minimising excess weight for the operator. All our stitching patterns and materials are designed to provide maximum strength and resistance to tears improving the durability and longevity of your storage solutions.

Ultrasonic Welded Seams

TEN provides ultrasonic welded seams on selected PVC material bags featuring a welded seam icon. Equipment bags face the toughest Australian and New Zealand conditions exposed to the sun, rain, heat and cold. Sewn seam bags can take on water if water pools on top of seams. By utilising radio frequency energy to instantly heat the thermoplastic coating this enables the two sheets of PVC to be permanently fused together giving a water tight join.

Whilst physically not as strong as a sewn seam it does have its own distinct advantages including abrasion resistance at the seam, resistant to thread decay and a neat flush finish.

What makes a TEN bucket bag the toughest?

Ultrasonic Welding

Ultrasonic welding is an industrial process whereby high-frequency ultrasonic acoustic vibrations are locally applied to workpieces being held together under pressure creating a solid-state weld.

Why Ultrasonic welding?

Ultrasonic welding is by far the best method for joining PVC materials. The weld is much stronger, compared to other technologies, such as hot air, hot wedge or impulse welding. The resulting weld is also airtight and waterproof.

Advantages!

- Repeatable, reliable technology
- Strong, durable and even welds
- Waterproof
- Multi-layer welding
- An environmentally friendly choice
